# HIP-67 HIP-97

# Users' Library Solutions

## Photo Dark Room

## INTRODUCTION

In an effort to provide continued value to its customers, Hewlett-Packard is introducing a unique service for the HP fully programmable calculator user. This service is designed to save you time and programming effort. As users are aware, Programmable Calculators are capable of delivering tremendous problem solving potential in terms of power and flexibility, but the real genie in the bottle is program solutions. HP's introduction of the first handheld programmable calculator in 1974 immediately led to a request for program **solutions** — hence the beginning of the HP-65 Users' Library. In order to save HP calculator customers time, users wrote their own programs and sent them to the Library for the benefit of other program users. In a short period of time over 5,000 programs were accepted and made available. This overwhelming response indicated the value of the program library and a Users' Library was then established for the HP-67/97 users.

To extend the value of the Users' Library, Hewlett-Packard is introducing a unique service—a service designed to save you time and money. The Users' Library has collected the best programs in the most popular categories from the HP-67/97 and HP-65 Libraries. These programs have been packaged into a series of low-cost books, resulting in substantial savings for our valued HP-67/97 users.

We feel this new software service will extend the capabilities of our programmable calculators and provide a great benefit to our HP-67/97 users.

## A WORD ABOUT PROGRAM USAGE

Each program contained herein is reproduced on the standard forms used by the Users' Library. Magnetic cards are not included. The Program Description I page gives a basic description of the program. The Program Description II page provides a sample problem and the keystrokes used to solve it. The User Instructions page contains a description of the keystrokes used to solve problems in general and the options which are available to the user. The Program Listing I and Program Listing II pages list the program steps necessary to operate the calculator. The comments, listed next to the steps, describe the reason for a step or group of steps. Other pertinent information about data register contents, uses of labels and flags and the initial calculator status mode is also found on these pages. Following the directions in your HP-67 or HP-97 **Owners' Handbook and Programming Guide**, "Loading a Program" (page 134, HP-67; page 119, HP-97), key in the program from the Program Listing I and Program Listing II pages. A number at the top of the Program Listing indicates on which calculator the program was written (HP-67 or HP-97). If the calculator indicated differs from the calculator you will be using, consult Appendix E of your **Owner's Handbook** for the corresponding keycodes and keystrokes converting HP-67 to HP-97 keycodes and vice versa. No program conversion is necessary. The HP-67 and HP-97 are totally compatible, but some differences do occur in the keycodes used to represent some of the functions.

A program loaded into the HP-67 or HP-97 is not permanent—once the calculator is turned off, the program will not be retained. You can, however, permanently save any program by recording it on a blank magnetic card, several of which were provided in the Standard Pac that was shipped with your calculator. Consult your **Owner's Handbook** for full instructions. A few points to remember:

The Set Status section indicates the status of flags, angular mode, and display setting. After keying in your program, review the status section and set the conditions as indicated before using or permanently recording the program.

**REMEMBER!** To save the program permanently, **clip** the corners of the magnetic card once you have recorded the program. This simple step will protect the magnetic card and keep the program from being inadvertently erased.

As a part of HP's continuing effort to provide value to our customers, we hope you will enjoy our newest concept.

## TABLE OF CONTENTS

<b>MACRO-PHOTOGRAPHY AND ENLARGING . . . . .</b>	<b>1</b>
An interchangeable solution among focal length, object distance, bellows extension, magnification, number of stops, and additional exposure.	
<b>TIME, F-STOP, MAGNIFICATION, PAPER SPEED, ENLARGING FACTORS . . . . .</b>	<b>6</b>
An interchangeable solution involving time, f-stop, magnification, paper speed.	
<b>COLOR PRINTING FACTORS . . . . .</b>	<b>10</b>
Computes variables in printing most color negative materials.	
<b>COLOR PRINTING FACTORS; NEW PAPER . . . . .</b>	<b>15</b>
Computes new exposure times from old numbers.	
<b>SUBTRACTIVE COLOR-PRINTING FILTERS; DENSITY CORRECTION . . . . .</b>	<b>19</b>
Keeps track of filters and f-number corrections.	
<b>TRI-COLOR PRINT EXPOSURE (PHOTO) . . . . .</b>	<b>23</b>
Computes new exposure times for change in color and/or density of a photographic print.	
<b>COLOR PRINT PROCESSING IN DRUM. . . . .</b>	<b>27</b>
Gives the color print developing time in a drum for any value of presoak water temperature and developer temperature.	
<b>CIBACHROME RECIPROCITY CORRECTION . . . . .</b>	<b>31</b>
Simplifies the exposure determination process.	
<b>PRINT VIEWING DISTANCE . . . . .</b>	<b>35</b>
Finds proper viewing distance from enlargement size and lens focal length.	
<b>PHOTO/IMAGE DISPLAY PARAMETERS . . . . .</b>	<b>39</b>
Computes parameters of interest that can be determined from known imaging system and data.	
<b>IMAGE PROJECTION DATA . . . . .</b>	<b>43</b>
Interchangeable solution for lens focal length, projection distance, and image size.	

# Program Description I

Program Title Macro-photography and Enlarging

Contributor's Name Hewlett-Packard

Address Corvallis Division, 1000 N. E. Circle Blvd.,

City Corvallis, State OR

Zip Code 97330

**Program Description, Equations, Variables** Given the focal length of a lens, the distance from the physical front of the lens barrel to the first principal plane, and only one of the following four quantities, the program will calculate any or all of the other three: object distance (or for enlarging, projection distance) to front of lens barrel, bellows extension, magnification, number of stops additional exposure required.

The principal planes of a thick lens or a lens system are two planes so located that if object distances are measured from the first principal plane and image distances are measured from the second principal plane, the thin-lens formula will hold.

The distance, "a", between the front of the lens barrel and the first principal plane is found by using the lens backwards to form an image of a distant object and then measuring the distance from the front of the lens barrel to the image. Subtract this distance from the marked focal length to obtain "a" (the result may be negative). For an enlarging lens, the distant object should be on the same side of the lens as the negatives normally are. "a" may be set to 0 if the object distance, "l", is not to be an input or output, or  $l \gg a$ .

**Operating Limits and Warnings** Be aware that many lenses have focal lengths a few millimeters longer or shorter than the nominal values marked on them.

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

## Program Description, Equations, Variables

See sketch, next page.

$$\frac{1}{s} + \frac{1}{s'} = \frac{1}{f}$$

Gaussian form of lens equation.

$$xx' = f^2$$

Newtonian form of lens equation.

$$M = \frac{s'}{s} = \frac{f}{x} = \frac{x'}{s}$$

Magnification.

$$E = \left(\frac{s'}{f}\right)^2 = (1 + M)^2$$

Exposure correction factor.

$$\# = \frac{\ln E}{\ln 2} = [2 \ln (1+M)] / \ln 2$$

Number of stops.

These equations are used in the following combinations:

$$x' = fM$$

$$M = 2^{\# / 2} - 1$$

$$\# = 2 \ln \left( \frac{1+a}{1+a-f} \right)$$

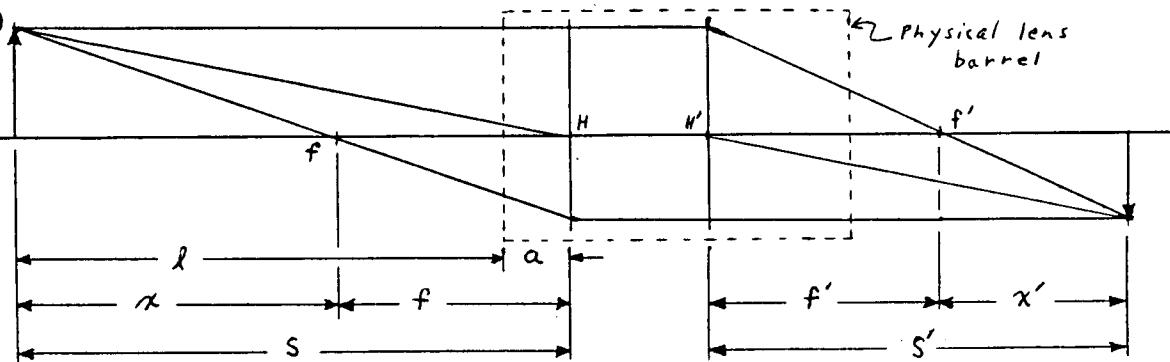

$$1 = \frac{f^2}{x'} + f - a$$

## Operating Limits and Warnings

# Program Description I

Program Title TIME, F-STOP, MAGNIFICATION, PAPER SPEED

## ENLARGING FACTORS

Contributor's Name Hewlett-Packard, Corvallis Division

Address 1000 N. E. Circle Blvd.

City Corvallis, State OR

Zip Code 97330

**Program Description, Equations, Variables** The program relates four variables used in photographic printing or enlarging: Time (seconds), f-stop, MAGNIFICATION (M) and paper PRINTING INDEX ( $P_I$ ). It uses the following formulas:

$$1) \text{ seconds} = \frac{K}{P_I} \cdot M^2 \cdot f^2$$

$$2) \text{ f-stop} = \sqrt{\frac{\text{sec} \cdot P_I}{K \cdot M^2}}$$

$$3) M = \sqrt{\frac{\text{sec} \cdot P_I}{K \cdot f^2}}$$

$$4) P_I = \frac{K}{\text{sec}} \cdot M^2 f^2$$

The factor K must be determined once by the user. It varies with the equipment used (Type enlarger, Lamp Wattage, etc.) To obtain K, a satisfactory print is made and the printing data entered in this formula:

$$K = \frac{\text{Exposure Time (sec)} \cdot P_I}{(f\text{-stop})^2 \cdot (\text{Magn.})^2}$$

**Operating Limits and Warnings** The program will accept all practical values of f-stop, Magnification M, Paper Printing Index ( $P_I$ ) and exposure times.

Paper printing indexes are published by KODAK (see page 2 References) or may be obtained by comparison printing when using brands with no published  $P_I$  data.

Certain f: stops on lenses are rounded off. Program will compute exact f-stop.

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

NEITHER HP NOR THE CONTRIBUTOR MAKES ANY EXPRESS OR IMPLIED WARRANTY OF ANY KIND WITH REGARD TO THIS PROGRAM MATERIAL, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. NEITHER HP NOR THE CONTRIBUTOR SHALL BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES IN CONNECTION WITH OR ARISING OUT OF THE FURNISHING, USE OR PERFORMANCE OF THIS PROGRAM MATERIAL.

# Program Description II

7

**Sketch(es)**

64	32	16	8	4	2	1	Relative Transmission f-stop
2.8	4.0	5.6	8.0	11	16	22	as marked true f-stop (see
2.83	4.0	5.66	8.0	11.3	16	22.63	Reference below).

**Sample Problem(s)** Note: The following sample problem was run with a K-factor (see page 1) of 31.25:

1) First Print Data:  $P_I = 3200$ , f-11,  $M = 4.5$ , 24 seconds

New Print:  $M=10$ ,  $P_I = 2000$ , f-5.6, sec = ?

2) Printing Time for f:56,  $M = 50$  (largeprint),  $P_I = 3200$ , sec = ?

3)  $P_I = 3200$ ,  $M = 5$ , Time = 16 sec, f-stop = ?

Typical  $P_I$  values: Kodabromide: Grade 1 = 5000

Grade 2 = 3200

Grade 3 = 2000

Grade 4 = 1250

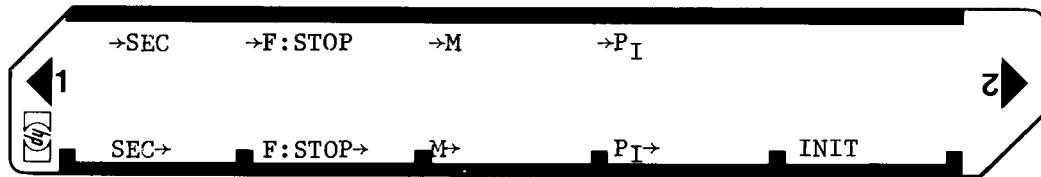

**Solution(s)** 1) New exposure time: [E]5.6 [B]10 [C]2000 [D][F][A] 49 seconds

2) 5.6[B] 50[C] 3200[D][F][A] 765 seconds

3) 16[A] 5[C] (3200[D]) [F][B]

# Program Description I

Program Title 67 - COLOR PRINTING FACTORS

Contributor's Name CARY ENOCK REINSTEIN  
 Address 3939 BIDWELL DR., #D438  
 City FREMONT State CA Zip Code 94538

Program Description, Equations, Variables THIS PROGRAM COMPUTES VARIABLES IN PRINTING MOST COLOR MATERIALS, EKTACOLOR RC, EKTACHROME RC AND PANALURE FOR EXAMPLE.

MAGNIFICATION AND LENS-TO-PAPER DISTANCE FACTORS, FILTER PACK CHANGES AND LENS APERTURE CHANGES ARE OUTPUT. RECIPROCITY CORRECTION IS APPLIED WHEN PRINTING TIME IS CHANGED. VALUES ARE PROJECTED BY CURVE FITTING ROUTINES AND HAVE BEEN CHECKED AGAINST KODAK'S "COLOR DATAGUIDE."

$$\text{EXPOSURE FACTOR LOG} = \frac{\text{LOG } A - \text{LOG } B}{2 \text{ LOG}}$$

THE ENLARGER LENS IS CONSIDERED A POINT LIGHT SOURCE WHERE LIGHT INCREASES AND DECREASES INVERSELY WITH THE SQUARE OF THE DISTANCE.

(AN APPROXIMATE RECIPROCITY FACTOR FOR BLACK AND WHITE WOULD BE: FACTOR  $1.192 \times .176$  -).

ALSO SEE "PETERSON'S PHOTOGRAPHIC, June 1976 p.7

Operating Limits and Warnings Y, M, C Filter values apply to Kodak CC and CP filters and may vary slightly according to different manufacturers. For dichroic filters see Printing Color Slides, Kodak, 1975 p. 14. Reciprocity is approximate with Cibachrome and will require testing. Accuracy decreases over extreme limits. Answers (time) are rounded to nearest 1/10 second.

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

Sketch(es)

Sample Problem(s) 1.) a trial print has been exposed for 20 seconds with filter pack 40Y, 10Y, 20M at a magnification of 5X. A new print will be made with a modified filter pack: 40Y, 20Y, 20M, 5M. The magnification will be 9X. Determine the required exposure, and (2.) the aperture increase required if the time is not changed. (3.) The print has been exposed at f/11 for 23 seconds. The optimum f/stop of your EL-Nikkor lens is 5.6. What should the exposure be?

Solution(s) (1.) 40 [f/b] [A] [B] 10 [f/B] [A] 20 [f/c] [A] .25  
20 [f/b] [B] 20 [f/c] [B] 5 [f/c] [B] [R/S] 1.18

# Program Description I

Program Title COLOR PRINTING-FACTORS; NEW PAPER

Contributor's Name Hewlett-Packard, Corvallis Division

Address 1000 N. E. Circle Blvd.

City Corvallis

State OR

Zip Code 97330

## Program Description, Equations, Variables

$$\begin{aligned} \text{New Printing-Pack} = & (\text{New Box C Factors}) - (\text{Old Box C Factors}) \\ & + (\text{Old Printing-Pack}) \end{aligned}$$

$$\text{New Exposure Time} = \frac{(\text{Old Exposure Time}) (\text{New Box Speed})}{(\text{Old Box Speed})}$$

$$\text{New Exposure Value} = \left[ \frac{(\text{New Exposure Time}) - (\text{Old Exp. Time})}{100 + (\text{working f/number})} \right] (\text{Old Exp. Time})$$

## Operating Limits and Warnings

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

# Program Description II

**Sketch(es)**

Sketch(es) are not provided for this program.

**Sample Problem(s)** You are printing color prints with a filter pack of 35y + 20M with a working f/number of f/5.6 and a 35-second exposure time when you run out of paper. The printing factors of the old box are:

00y + 10 M + 25C, Speed = 105. The printing factors of the new box are: 20y + 00M + 05C, speed = 85.

- 1) What is your new printing pack?
- 2) What is your new exposure time?
- 3) If you leave your exposure time constant, what will your new f/number be?

**Solution(s)** 1)  $20[\uparrow] 0[\uparrow] 5[A] / 0[\uparrow] 10[\uparrow] 25[B] / 35[\uparrow] 20[\uparrow] 0[C] \rightarrow$

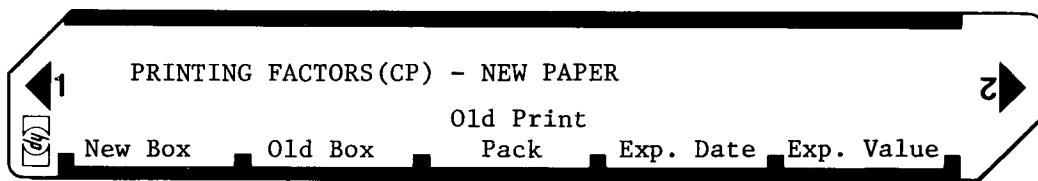

→ New Printing pack = 75y + 30M

2)  $35[\uparrow] 105[\uparrow] 85[0] = 28.33$  seconds

3)  $5.6[E] = 7.93 \approx f/8$

**Reference(s)** THIS PROGRAM IS A TRANSLATION OF THE HP-65 USERS LIBRARY PROGRAM #01410A SUBMITTED BY STUART A. RIGG.

# Program Description I

**Program Title** SUBTRACTIVE COLOR-PRINTING FILTERS; DENSITY CORRECTION

**Contributor's Name** Hewlett-Packard, Corvallis Division

**Address** 1000 N. E. Circle Blvd.

**City** Corvallis

**State** OR

**Zip Code** 97330

**Program Description, Equations, Variables** Program compares given values with the pre-programmed values to provide running sum of f-number corrections. Given the working f-Number (in step 2), program will provide running working f number

**Operating Limits and Warnings** Value of filters must be  $\leq \pm 50$  CP or cc.

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

NEITHER HP NOR THE CONTRIBUTOR MAKES ANY EXPRESS OR IMPLIED WARRANTY OF ANY KIND WITH REGARD TO THIS PROGRAM MATERIAL, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. # Program Description II

Sketch(es)

**Sample Problem(s)** (Filters: 25; 5; 10; 20; 30; 40; 50 CP) ← Standard Values

- 1) Your initial printing-pack is 15y + 20M. You find you must add 35y + 10M to correct the color-balance of your print. By how many f/numbers will your exposure change?
- 2) You change a printing-pack from 90M + 40C to 5M + 50C; if your initial F-number is 5.6, what is your final f/number?
- 3) Changing your last CP Pack (5M + 50C) to 5y + 35C will give what f/number?
- 4) Your printing-pack is 25y + 40C; changing your pack to 10y + 5C will require what adjustment in exposure?

**Solution(s)** 1) [E]10[A] 5[A] 20[B] → -0.67 f/stops (increase in exposure)  
(decrease in f-number)

2) [E]5.6 [STO] [7] 50 [CHS] [B] 30[CHS][B] 5[CHS][B] 10[C] → f/6.93  
(new f/number)

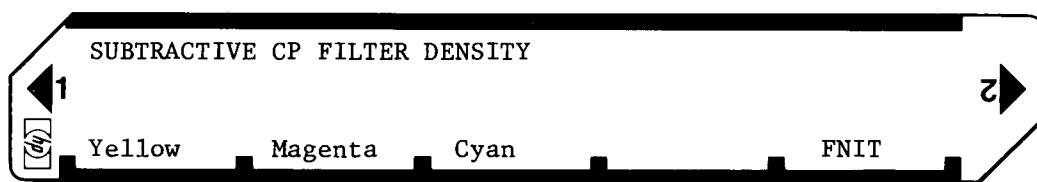

3) 5 [CHS] [B] 5[A] 10[CHS][C] 5[CHS][C] → f/7.93 (new f/number)

4) [E]10[CHS][A] 5[CHS][A] 30[CHS][C] 5[CHS][C] → Increase of 1.33 F/stops  
(Decrease in exposure)

# Program Description I

Program Title      TRI-COLOR PRINT EXPOSURE (PHOTO)

Contributor's Name      Hewlett-Packard, Corvallis Division

Address      1000 N. E. Circle Blve.

City      Corvallis

State      OR

Zip Code      97330

**Program Description, Equations, Variables** Red, green, and blue exposure times, in seconds, used to produce a color test print by the tri-color additive exposure system are stored in HP67/97. If test print is off-color or too dark, or too light, the desired correction is inserted and new exposure times calculated to bring new print into color balance and proper density. This program balances a color wheel in the same manner as an automobile wheel by adding and subtracting weights placed 120° around the circumference to pull center of balance into the hub. Sine curve is used to place the red, green, and blue weights on the wheel and exposure factors are calculated logarithmically. LBLA will shift color without changing print density since weight added to one side is subtracted from the other. Overall print density is corrected with LBL B.

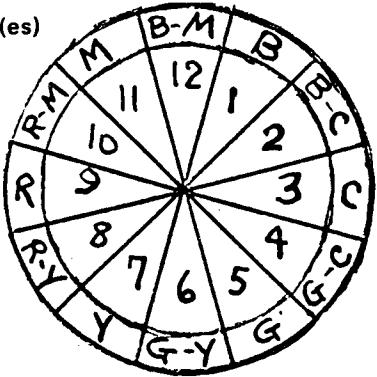

**Operating Limits and Warnings** No correction is made for extremely short (under 10 seconds) or long (more than 60 seconds) exposure reciprocity.

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

NEITHER HP NOR THE CONTRIBUTOR MAKES ANY EXPRESS OR IMPLIED WARRANTY OF ANY KIND WITH REGARD TO THIS PROGRAM MATERIAL, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. # Program Description II

Sketch(es)

COLOR WHEEL

COLOR	SECTOR
BLUE	1
BLUE-CYAN	2
CYAN	3
GREEN-CYAN	4
GREEN	5
GREEN-YELLOW	6
YELLOW	7
RED-YELLOW	8
RED	9
RED-MAGENTA	10
MAGENTA	11
BLUE-MAGENTA	12

**Sample Problem(s)** A trial print is made by exposing the color print paper f11 through the red, green, and blue filters for 25 secs. each. After processing and drying the print and inspecting it in white light, it is determined to be 7 1/2 units too red-yellow and 1/2 stop too light. If badly off color, it may require two attempts to zero in. Bear in mind that if too dark and test print is not ad badly off color as it appears and vice-versa, add an extra 10 units of color compensation for each 1/3 to 1/2 stops of under exposure and vice-versa.

**Solution(s)** 25 [ENT<sup>↑</sup>] [ENT<sup>↑</sup>] [C] which was the red, green, and blue test print exposure times.

8 [ENT<sup>↑</sup>] for red-yellow sector

17.5 [CHS] for 7 1/2 units too much and 1/2 stop too light.

[A] →

For density correction:

.5 (for half stop darker) [B] →

# Program Description I

Program Title	COLOR PRINT PROCESSING IN DRUM		
Contributor's Name	Hewlett-Packard, Corvallis Division		
Address	1000 N. E. Circle Blvd.		
City	Corvallis	State	OR
		Zip Code	97330

**Program Description, Equations, Variables** Gives the color print developing time in a drum (Unidrum) for any value of presoak water temperature in the drum, and developer temperature, from 70 degrees F to 120 degrees F, for Unicolor B, RZ, and AR chemistry. The formula is as follows:

$$\log_{10} t = K - .012 T_{ps} - .00643 T_D$$

Where  $T_{ps}$  = presoak water temperature in degrees F.

$T_D$  = developer temperature in degrees F.

K = a constant which depends on the Unicolor chemistry being used.

t = developing time

The values of K are:

Chemistry	K
B	1.983
AR	2.290
R2	2.427

**Operating Limits and Warnings** Develop by time and temperature using the programs if you choose, but remember that a different color balance will probably be apparent at each set of temperatures. So, be consistent, keep processing temperatures constant, at least during one processing session.

This program has been verified only with respect to the numerical example given in *Program Description II*. # Program Description II

Sketch(es)

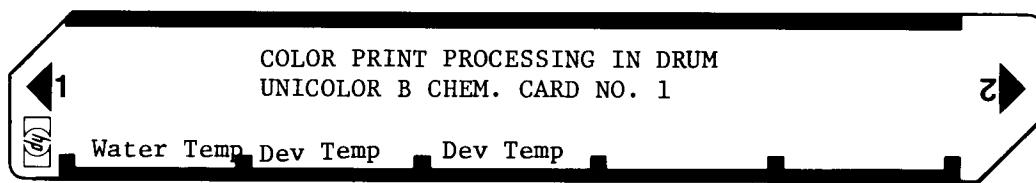

**Sample Problem(s)** Find the developing time in minutes when using Unicolor Type AR chemistry, with 110 degrees F. Presoak water temperature in the Unicolor Drum, and 80 degrees F. developer temperature.

Enter 2[D] for Unicolor AR  
**Solution(s)** Chemistry. Key in 110 degrees F. Presoak water temperature, and press key [A].  
Key in 80 degrees F. developer temperature, and press key [B].  
Press key [C] for the answer = 2.85 minutes developing time. Since developing times to the nearest 1/2 minute are usually used, this answer would be considered as 3 minutes.

# Program Description I

Program Title	CIBACHROME RECIPROCITY CORRECTION		
Contributor's Name	HEWLETT-PACKARD		
Address	1000 NE. CIRCLE BLVD.		
City	CORVALLIS	State	OR
			Zip Code 97330

**Program Description, Equations, Variables** Computes exposure times and filter pack corrections from desired theoretical exposure change. Reciprocity failure and filter correction data from the reference are programmed as

$$\log t_2 = 1.279 D + \log t_1$$

$$Y = -3 \log^2 t_2 + 15 \log t_2 - 6.4$$

$$C = \begin{cases} -7.2 \log^2 t_2 + 1.08 \log t_2 + 1.12 & ; t_2 < 30 \text{ sec} \\ -20 \log t_2 + 16.5 & ; t_2 > 30 \text{ sec} \end{cases}$$

where  $t_1$  = Exposure time for test print

D = Desired Log exposure change

$t_2$  = Exposure time for new print

Y = Yellow filtration correction for reciprocity failure

C = Cyan filtration correction for reciprocity failure

Note: 0 filtration correction corresponds to 3 sec exposure

**Operating Limits and Warnings** 1. Published data are given from 3 to 300 sec. actual exposure time. Reciprocity curve is log-log linear over entire region and can thus probably be extrapolated beyond 300 sec. Yellow filtration appears asymptotic to +12 as 300 sec is approached and cyan filtration is log-log linear beyond 30 sec. User should understand that numbers computed beyond 300 sec. are extrapolations. 2. Filters are accurate to  $\pm 2$  units (0.02 density). 3. Published data pertain to type D material but program is primarily used by author successfully with type A.

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

NEITHER HP NOR THE CONTRIBUTOR SHALL BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES IN CONNECTION WITH OR ARISING OUT OF THE FURNISHING, USE OR PERFORMANCE OF THIS PROGRAM MATERIAL.

# Program Description II

**Sketch(es)**

**Sample Problem(s)** 1) A test print was correctly color balanced but 1 stop (0.3 log units) under exposed at 15 sec. Find the new exposure and filter pack changes required.

2) A pleasing print is made with 300 sec. exposure time. It is desired to shorten this time to speed production. The enlarger lens is opened 3 stops (.9 log units) requiring a reduction of a like amount in exposure time. Find the new exposure time and filter pack changes.

Note: a) A 1 stop change corresponds to a doubling or halving of exposure.  $\log 2 = .3$  Thus a .1 change corresponds to 1/3 stop.

b) Filtration changes are given as 100 times the log of the filter density as is the common practice.

**Solution(s)**

1) 15 A 7 (Yel filter Rel. to 3 sec. exp.)  
 R/S -8 (Cyan filter Rel. to 3 sec. exp.) optional  
 .3 B 36 New exposure time, sec  
 C 3 Add 3 yel (log Dens = .03)  
 D -7 Subtract 7 Cyan (log Dens = .07)

2) 300A 12 (Cyan filter Rel. to 3 sec.)  
 .9[CHS]B 21 New exposure time, sec.  
 C -4 Remove 4 yel (.04)  
 D 23 Add 23 Cyan (.23)

# Program Description II

**Sketch(es)**

**Sample Problem(s)** A) A photo was taken with a 135 mm lens and enlarged 8 times (negative size). What is the proper viewing distance in feet necessary to maintain proper subject perspective?

B) You have a photo you wish to be viewed from 20 feet. It was taken with a 105 mm lens. How many diameters enlargement should the print be?

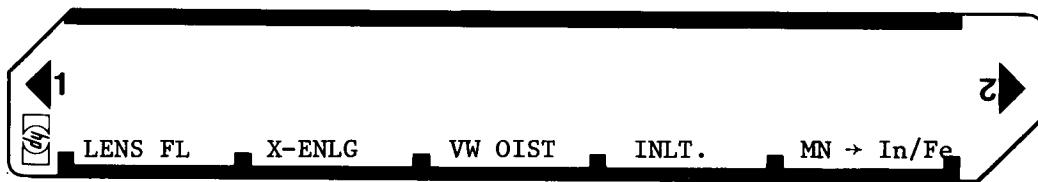

C) You wish a 12X print which will be viewed from 1800 mm. What focal length lens should you use?

D) Your negative size is 24 mm X 36 mm; your print size is 508.00 mm X 762.00 mm. What is the magnification factor?

**Solution(s)** A) 3.54 feet. [D]135 [A]8 [B][E][R/S]  $\rightarrow$  3.54  
 B) 58.06X[D]105 [A]20[f][B][C]  $\rightarrow$  58.06X (negative size)  
 C) 150.00 mm lense [D]12 [B]1800 [C]  $\rightarrow$  150.00  
 D) 21.17 X 24[ENT<sup>↑</sup>]36[ENT<sup>↑</sup>] 508[ENT<sup>↑</sup>] 762[F][A]  $\rightarrow$  21.17 X

# Program Description I

Program Title	PHOTO/IMAGE DISPLAY PARAMETERS		
Contributor's Name	Hewlett-Packard, Corvallis Division		
Address	1000 N. E. Circle Blve.		
City	Corvallis	State	OR
			Zip Code 97330

**Program Description, Equations, Variables** Photo or image interpretation can be accomplished from photographic film, projected, or displayed on closed circuit TV viewing systems. This program computes parameters of interest that can be determined from known system and data characteristics. Computation sequence is to solve for scale, pixel dimensions, number of pixels, scan lines per pixel, magnification for 1 line/pixel portrayal, and maximum viewing distance for visual acuity limiting. All quantities are stored for later review.

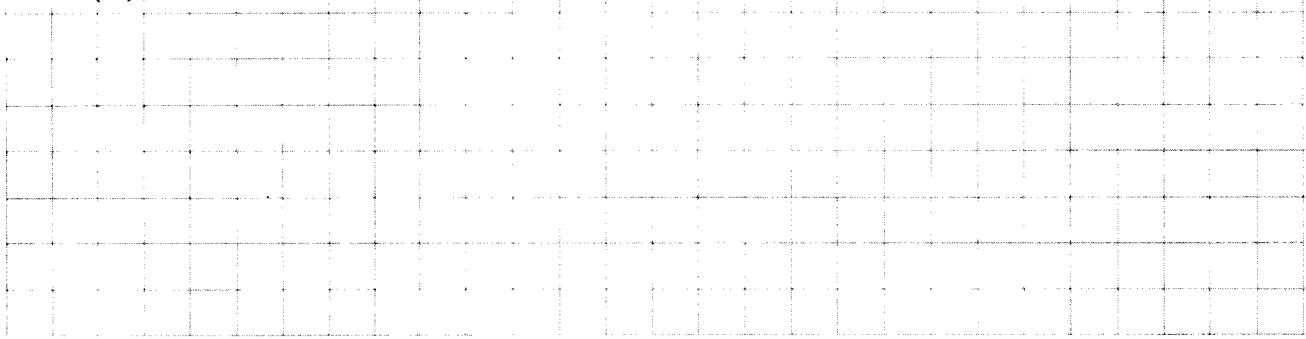

The manual entry provision allows starting anywhere in the program for individual computation.

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

NEITHER HP NOR THE CONTRIBUTOR MAKES ANY EXPRESS OR IMPLIED WARRANTY OF ANY KIND WITH REGARD TO THIS PROGRAM MATERIAL, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. NEITHER HP NOR THE CONTRIBUTOR SHALL BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES IN CONNECTION WITH OR ARISING OUT OF THE FURNISHING, USE OR PERFORMANCE OF THIS PROGRAM MATERIAL.

# Program Description II

## Sketch(es)

Utilize the program to determine parameters for a photo image  
**Sample Problem(s)** covering 10 nautical miles over a 2.5-inch field. Assume 50 foot  
 resolution. Consider TV display on a 17-inch monitor with a 10.2-inch vertical  
 dimension (4/3 aspect ratio), utilizing a 1225 line raster (1190 active line scans).

Enter data coverage	10 nmi.	↑
Enter data field	2.5 in. [f][A]	291648 (: 1)
Enter resolution element	50 ft.	A 0.00206 in.
Enter scan display dimns.	10.2 in.	B 4958.02
Enter display lines	1190	C 0.24
Find magnification		R/S 4.17
Find Max. viewing dist.	[f][D][D]	29.47 in.
Recall quantities.		E 291648
		R/S 0.0021
		R/S 4958.0160
		R/S 0.2400
		R/S 4.1664
		R/S 29.4672
		R/S 1190.0000
		R/S 10.2000

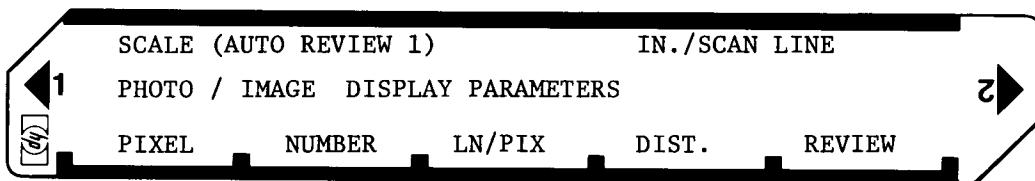

## Solution(s)

#2 Find pixel dimensions for a resolution element of 20 ft. on a 100,000 : 1 scale.

Enter scale	100,000	↑
Enter Resolution ele.	20 ft.	A 0.00240 in.

# Program Description I

Program Title IMAGE PROJECTION DATA

Contributor's Name Hewlett-Packard, Corvallis Division

Address 1000 N. E. Circle Blvd.

City Corvallis

State OR

Zip Code 97330

**Program Description, Equations, Variables** Provides unknown required to select proper lens, projection distance, screen size when 2 are known, then gives maximum viewing area, estimates seating capacity, gives minimum and maximum viewing distances, uses film format factor stores in R4, works for 8, Super 8, 16 mm 35 full and half frame, 110, 126, 127, 120 (2 1/4 sq) film sizes and for 5, 7, 10 "overhead projectors. [Format factors for different sizes can be figures closely by formula  $2.16 \times$  width of original (in mm)] provides for conversion formula  $2.16 \times$  width of original (in mm) provides for conversion of inches to feet and mm to inches.

Formula(s) F = Factor L = Full Length S = Screen width O = Distance

To find Distance =  $(s + F) \times L$

To find Lens =  $D + (s + F)$

To find Screen =  $F \times (D + L)$

Viewing Area =  $S^2 + 11$

Minimum Dist. =  $S \times 2$

Maximum Dist. =  $S \times 4$

Capacity = (Viewing Area) + 6 (6 sq' per person)

**Operating Limits and Warnings** FORMAT VS. FACTOR ROUTINE

Run or store new factor in R4 to change format. - 110 film factor assumes 110 projector is used, which may result in slight error if 35 mm projector used.

Similarly for other sizes not shown in proper projector. - Viewing area, capacities etc., are estimated and actual figures vary depending on room characteristics and seating arrangement, etc.

Recommend reduction by 25% for audience comfort.

This program has been verified only with respect to the numerical example given in *Program Description II*. # Program Description II

**Sketch(es)**

FORMAT VS. FACTOR REFERENCE (F)				
[A] 16 (mm) F (4.68)	[B] 127 F (18)	[C] 120 (21/4 <sup>sq</sup> ) F(26.4)	[D] 10 (10x10) F(120)	[E] S
[R/S] 8 (mm) F (2.54)	[R/S] 126 F (12.6)	[R/S] 35 (mm) F (15.96)	[R/S] 7 (7x7) F (84)	T O R
[R/S] 58 (super 8) F (2.09)	[R/S] 110 F (7.35)	[R/S] 35.5 1/2 frame F (10.8)	[R/S] 5 (5x5) F (60)	E S "F" IN R 4

**Sample Problem(s)** Projector showing 35 mm slides on 8' screen requires what distance [1] to fill screen? Lens is 80 mm. Being limited to 6' projection distance what size [2] is image? This is unsatisfactory, so what lens [3] would solve problem? Since only the projection distance is limited, what is the estimated viewing area [4], audience capacity [5], and minimum [6] and maximum [7] viewing distances?

NOTE: Screen or image size is only required data for [4], [5], [6], [7], and previous problems need not be solved first.

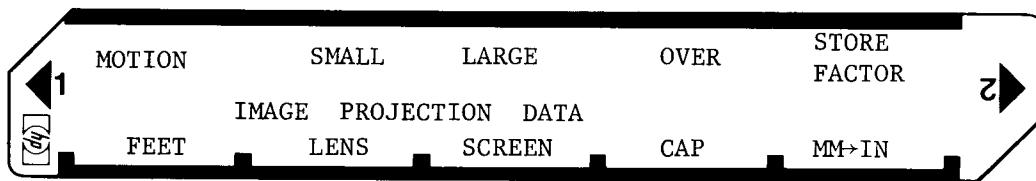

**Solution(s)** [f] [C] = 120, [R/S] = 35 (mm), [f] [E] = 15.96; 80 [E] = 3.15", [B] = 0, 8 (ENTER), 12 (X), (C)=0; A 18.9' [1]; 6[A] = 0, [C] = 30.4" [2]; 96[C] = 0, [B] = 1.0" [3] [D] = 8.37.8<sup>sq</sup> [4]; R/S = 140 people [5]; R/S = 16.0' min [6]; R/S = 48.0' max [7]

**Reference(s)** Various slide rule calculators as available from knox, radiant, daylite screen manufacturers.

This program is a modification of the Users' Library program #0377A submitted by Harry M. Sweeney

## **Hewlett-Packard Software**

In terms of power and flexibility, the problem-solving potential of the Hewlett-Packard line of fully programmable calculators is nearly limitless. And in order to see the practical side of this potential, we have several different types of software to help save you time and programming effort. Every one of our software solutions has been carefully selected to effectively increase your problem-solving potential. Chances are, we already have the solutions you're looking for.

## **Application Pacs**

To increase the versatility of your fully programmable Hewlett-Packard calculator, HP has an extensive library of "Application Pacs". These programs transform your HP-67 and HP-97 into specialized calculators in seconds. Each program in a pac is fully documented with commented program listing, allowing the adoption of programming techniques useful to each application area. The pacs contain 20 or more programs in the form of prerecorded cards, a detailed manual, and a program card holder. Every Application Pac has been designed to extend the capabilities of our fully programmable models to increase your problem-solving potential.

You can choose from:

**Statistics**  
**Mathematics**  
**Electrical Engineering**  
**Business Decisions**  
**Clinical Lab and Nuclear Medicine**

**Mechanical Engineering**  
**Surveying**  
**Civil Engineering**  
**Navigation**  
**Games**

## **Users' Library**

The main objective of our Users' Library is dedicated to making selected program solutions contributed by our HP-67 and HP-97 users available to you. By subscribing to our Users' Library, you'll have at your fingertips, literally hundreds of different programs. No longer will you have to: research the application; program the solution; debug the program; or complete the documentation. Simply key your program to obtain your solution. In addition, programs from the library may be used as a source of programming techniques in your application area.

A one-year subscription to the Library costs \$9.00. You receive: a catalog of contributed programs; catalog updates; and coupons for three programs of your choice (a \$9.00 value).

## **Users' Library Solutions Books**

Hewlett-Packard recently added a unique problem-solving contribution to its existing software line. The new series of software solutions are a collection of programs provided by our programmable calculator users. Hewlett-Packard has currently accepted over 6,000 programs for our Users' Libraries. The best of these programs have been compiled into 40 Library Solutions Books covering 39 application areas (including two game books).

Each of the Books, containing up to 15 programs without cards, is priced at \$10.00, a savings of up to \$35.00 over single copy cost.

The Users' Library Solutions Books will compliment our other applications of software and provide you with a valuable new tool for program solutions.
