

Hewlett-Packard's Great Adventures

In 1972, an incredible excitement greeted the introduction of the world's first and only scientific handheld calculator, the HP-35. The slide rule became obsolete. Accurate answers became possible in seconds rather than hours. And, the HP-35 was so popular, it spawned other portable computing products, increasing functional capability with each new model.

Hewlett-Packard now celebrates ten years of unique applications for portable computing devices. Join us as we relive the "Great Adventures" of these innovative products.

TWO HP-41C'S, CARRIED BY ASTRONAUT ROBERT CRIPPEN, ABOARD THE SPACE SHUTTLE COLUMBIA, contained critical programs. One to tell *Columbia* the next ground station to contact, when contact would be made and for how long. The other to calculate both the pre-entry center of gravity (balancing point) and the amount of fuel that must be burned to maintain the precise balancing point during descent.

COURAGEOUS, 1977 AMERICA'S CUP WINNER.
The 12-meter, American sailing yacht, skippered by Ted Turner, was navigated by Bill Gorsch and the Hewlett-Packard 97. Crucial to the yacht's optimum performance were various tactical data involving time to next mark, course direction, wind speed and wind direction. The HP-97, the only calculator in use during the race, was aboard the *Courageous* to provide this critical information and to help win the race.

IN 1972, CHRIS BONINGTON LED THE BRITISH ATTEMPT TO CLIMB THE SOUTHWEST FACE OF MT. EVEREST. Here at the base camp on Khumbu Glacier, the HP-35 performed at temperatures as low as -30°C. HP was proud to perform the necessary computations for the important physiological and surveying experiments conducted prior to the ascent. The climbing expedition also relied upon the HP-35 for calculating the weight of each Sherpa's load.

THE HEWLETT-PACKARD 65 IN SPACE. Aboard the U.S. *Apollo* in its historic 1975 space linkup with the Russian *Soyuz*, an HP-65 calculated critical linkup maneuvers to place both spacecraft into the same orbit and to aid *Apollo* when it was 22 miles from *Soyuz*. Commander Thomas P. Stafford and crew also relied on the HP-65 to precisely pinpoint *Apollo*'s high-gain antenna at an orbiting satellite to assure communications with earth.

EVERY TEN MINUTES, AN HP-85 TAKES THE PULSE OF MT. ST. HELENS. From the crater floor, a tiltmeter, strainmeter and magnetometer transmit data to an HP-85 in Vancouver, Washington. Since May, 1981, revealing data tables and graphs, printed daily by the HP-85, have warned geologists of telltale tilt preceding eruptions. These records will become part of the published scientific papers of the United States Geological Survey.

THE HP-67 HELPED THE TYRRELL RACING TEAM CUSTOMIZE THEIR CARS to expertly perform on the Grand Prix tracks. These formula racers, designed to compete under specific conditions, depended upon the HP-67 for accurate data on fuel calculations and suspension system characteristics, such as roll center height, and wheel movement. With the aid of the HP-67, the Tyrrell Team won the 1978 Grand Prix Races in Monaco and in Long Beach, California.

THE HP-41C AND THE 1980 AMERICA'S CUP WINNER, FREEDOM. Onboard the 12-meter yacht, Hewlett-Packard's 41C continually computed *Freedom's* distance ahead and behind other Twelves competing for the coveted first place. Skipper, Dennis Conner chose the HP-41 for its convenient handheld size and for its ability to "stand up to the weather." And stand up it did—during the best-of-seven races!

DOUBLE EAGLE II PUT AN HP-67 AND NAVIGATION PAC to critical use in 1978 to achieve the first successful Atlantic crossing by balloon. After leaving the Newfoundland coast, a storm approached. To inform the air and ground crew of its relation to the craft, Maxie Anderson calculated the position of Venus and Polaris with the aid of his HP-67. He then reported to the ground crew, in a matter of minutes, what would ordinarily take 6 to 7 hours to relate from Goddard Space Flight Center.

HP PERSONAL COMPUTERS AID ANALYSES AT THE WORLD'S LARGEST REGIONAL BLOOD BANK. The New York Blood Center uses six HP-85's in the exacting analyses of the large amounts of blood handled everyday. In testing blood for forms of hepatitis, Blood Center technicians inject enzymes into samples and record the reaction. Working with Abbott VP blood analyzers, dependable HP-85's keep accurate track of the samples, and store and print results of the tests.

THE HP-35, THE WORLD'S FIRST HANDHELD SCIENTIFIC CALCULATOR, orbited in space aboard three manned *Skylab* missions (1973-74). Solar research figured prominently among the wide assortment of experimental research conducted. Used as a backup to on-board computers, the HP-35 calculated predocking rocket burns necessary to align the Apollo Command Module with *Skylab*. In addition, the HP-35 helped *Skylab* crews aim their telescopes at stars in attempts to measure ultraviolet radiation.

THE SUBMERSIBLE RESEARCH VESSEL, ALVIN, NAVIGATED THE PACIFIC'S GALAPAGOS RIFT IN 1977. The HP-97 was aboard to calculate water properties, e.g., salinity, temperature, in case on-board computers malfunctioned. *Alvin* discovered warm, seafloor springs teeming with giant clams and tube worms, never before seen by man. A parent vessel, *Knorr*, used the HP-97 topside for radar ranging and data reduction.

FROM THE FIRST scientific handheld calculator, the HP-35, to the introduction of the HP-41 and the HP-85, personal computation has changed the way people work and play. Portable computing power provided the necessary instantaneous calculations to free great minds for the accomplishment of feats never before possible.

Hewlett-Packard is proud of its "Great Adventures" and will continue to open new frontiers with future portable computing devices. Devices which will advance the way people access, store and manage ever-increasing amounts of information. The future belongs to the world of electronics, the world of Hewlett-Packard.
