Program Title

AREA OF LAND BY POINT-TO-POINT
TRAVERSING

No. of Steps/Lines

138

Category No.

470

Category Name

SURVEYING

Abstract — 50 Word Maximum This program computes the area of land by point-to-point traversing, given the bearing, distance, and radius of curvature of each side. The error in closure is displayed as well as the area in square feet and acres. Bearings and quadrants are previewed and may be changed.

Necessary Accessories: None required.

PROGRAM DESCRIPTION I

Page 1 of 8

Program Title AREA OF LAND BY POINT-TO-POINT TRAVERSING
Contributor's Name Gary Goodman
Address OSU IRCC, 406 Baker Systems Engr. Bldg., 1971 Neil Avenue
City Columbus **State/Country** Ohio/U.S.A. **Zip Code** 43210

Program Description, Equations, Variables This program computes the area of a plot of land by point-to-point traversing around the perimeter. At each point the user supplies the bearing (and quadrant) and the distance to the next point. If the side is curved, the radius of curvature is required. The bearing is reviewed and may be changed before final entry. Also a side may be restarted at anytime up until the next side is requested. The output consists of the closure error in feet, (The direction of the final point from the starting point may be obtained.), and the area in square feet and in acres.

The method and equations used are described on the following page.

Necessary Accessories None

Operating Limits and Warnings The arc of a curved side must be $\leq 180^\circ$.

Reference(s) _____

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

NEITHER HP NOR THE CONTRIBUTOR SHALL BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES IN CONNECTION WITH OR ARISING OUT OF THE FURNISHING, USE OR PERFORMANCE OF THIS PROGRAM MATERIAL.

The coordinates of each point along the traverse are found from the coordinates of the previous point by vector addition

$$x_i = x_{i-1} + d \cos \theta \quad y_i = y_{i-1} + d \sin \theta$$

where d and θ are the distance and bearing of the new point relative to the previous point. In practice, bearings are usually specified in the range 0 to 90 degrees and in a particular quadrant, such as N 38° 17' 23" W. The program converts these bearings to angles on the full circle.

The area of any polygon can be readily found by first connecting one vertex (the starting point) with every other vertex of the polygon, and then summing the areas of the triangles thus formed, taking into account that when the angle, ϕ_i , to a vertex is less than the angle, ϕ_{i-1} , to the previous vertex, the area is to be considered negative. See Figure 1.

Figure 1.

Figure 2.

The area of triangle (0,1,2) is

$$\frac{1}{2}(x_1 y_2 - x_2 y_1)$$

This formula automatically gives the proper sign for inclusion into the total area.

If the side is curved, the area which lies between the arc and its chord must be added to or subtracted from the total area. See Figure 2.

The area between the arc and the chord is

$$\left\{ 2 \sin^{-1} (d/2r) - \sin \left(2 \sin^{-1} (d/2r) \right) \right\} \frac{r^2}{2}$$

where r is the radius of curvature, and d is the length of the chord. Note that the arcsine is in radians.

PROGRAM DESCRIPTION II

Page 3 of 8

Sample Problem (Sketch if Desired)

Find the area of the tract of land described below.

Beginning, for reference, at point 0;

Thence N 47°-34'-28" E, a distance of 309.82' to a point;

Thence S 82°-50'-13" E, a distance of 279.64' to a point;

Thence, with a curve to the left having a radius of 590', and the chord of which bears N 52°-48'-37" W, a distance of 631.72' to a point;

Thence S 0°-17'-56" W, a distance of 556.00' to the beginning point.

SOLUTION:

Input	Function	Display	Comments
	[XEQ] SIZE 005		Minimum size
	[XEQ] AREA	1. BEARING?	Prompt for bearing of side 1
47.3428	[B]	N 47-34-28 E	Bearings entered as dd.mm.ss
